# Monthly health report

Sunrise Bakery website • October 2026

| | |
|---|---|
| **Prepared for** | Maya Torres, Sunrise Bakery (fictional) |
| **Website** | http://good.fixture.test:4500/ |
| **Plan** | Business Care, includes 30 minutes a month for updates or troubleshooting. Checks and this report don't use that time. |
| **Service period** | Thu, October 29, 2026 to Sun, November 29, 2026 |
| **Automated checks run** | Thu, October 29, 2026 |

## SUMMARY

Your site is working well this month. Every agreed page opened on desktop and phones, images loaded, and the catering booking page opened. One thing to plan for: the site still opens on an http address rather than https, so browsers label it not secure.

## 1. WHAT WAS CHECKED

- Destination opens: 1 of 1 passed
- Secure connection (HTTPS): 0 of 3 passed
- Images load: 6 of 6 passed
- Links within the site: 1 of 1 passed
- Fits the screen (no sideways scrolling): 6 of 6 passed
- Page loads: 6 of 6 passed
- Desktop appearance looks right: passed (checked by hand)
- Mobile appearance looks right: passed (checked by hand)
- Hours, prices, and contact details are correct: passed (checked by hand)

Pages in scope: Home, Menu, Contact

Destinations opened: Catering booking

## 2. WHAT NEEDS ATTENTION

### Secure connection (HTTPS): Needs manual review

http://good.fixture.test:4500/

What I saw: The page uses http, not https.

What it means: Browsers label http pages as not secure.

Suggested next step: Consider turning on HTTPS for the site.

### Secure connection (HTTPS): Needs manual review

http://good.fixture.test:4500/contact

What I saw: The page uses http, not https.

What it means: Browsers label http pages as not secure.

Suggested next step: Consider turning on HTTPS for the site.

### Secure connection (HTTPS): Needs manual review

http://good.fixture.test:4500/services

What I saw: The page uses http, not https.

What it means: Browsers label http pages as not secure.

Suggested next step: Consider turning on HTTPS for the site.

## 3. WHAT I FIXED

Updated the holiday hours on the home and contact pages (12 minutes of your included time).

## 4. NEEDS YOUR APPROVAL OR MORE WORK

Turning on HTTPS with your host and redirecting the old http address. I can also add the new spring menu as its own page.

**Estimate: HTTPS about 1 hour, $100; spring menu page about 2 hours, $200. Nothing here starts until you approve it.**

## COULD NOT CHECK

- Contact form sends and arrives in the inbox: You asked me to skip form tests while the inbox moves to the new address.

## ISSUES I LOOKED INTO

You mentioned the menu page felt slow on Saturday. It loaded in under a second in every check this month, so I could not reproduce it.

## RECOMMENDED NEXT STEPS

Once your new inbox is set up, I will test the contact form next month.

## ABOUT THESE CHECKS

Automated checks are read only. They open pages and links but never submit forms, send messages, book appointments, make payments, or sign in.

A booking or checkout page opening only shows that the page loads. It does not confirm that booking or payment works.

This report covers the agreed pages and checklist for this month. It is not a security, accessibility, or legal compliance certification, and it does not test every feature.

Some services block automated visitors. When that happens the item is listed as could not check, which is not the same as a problem with your site.
